

OpenVINO is now available on Audacity

Please note that for OpenVINO to work you need to upgrade to Audacity 3.7.4 or higher

The following effects are available:

- **Music separation**
Separate a mono or stereo track into individual stems -- Drums, Bass, Vocals, & Other Instruments.
- **Noise suppression**
Reduce background noise in a recording. Works best on spoken word audio.
- **Music generation and continuation**
Uses MusicGen LLM to generate snippets of music, or to generate a continuation of an existing snippet of music.
- **Whisper transcription**
Transcribe audio to text using OpenAI's Whisper model. Tip: You can export the resulting label track as a subtitle file via File → Export other → Export labels.
- **Audio Super resolution**
Increase the sampling rate of an audio signal – in other words, it upsamples audio to improve its fidelity, clarity, or compatibility with high-resolution standards. Useful for older 8kHz recordings, such as telephone calls.
