

VT-Mini

Vocal tuner · version 1.0.1

TUNE — pitch correction

KEY, SCALE	The notes to tune to. Pick a preset scale, or build your own.
RETUNE	How fast the correction arrives. Fast is the hard, modern sound. Slow slides into the note.
AMOUNT	How far the pitch moves towards the note. 100% is fully in tune.
NATURAL	How much of the singer's vibrato and delivery survives.
VARIATION	Flattens the movement inside a held note. Studio engine only.

CLEAN

A low cut and a dynamic de-esser on one graph. Drag the nodes.

Engines — bottom right

LOW LATENCY	About 9 ms. Sing through this one. It is the default.
STUDIO	About 100 ms and more accurate. Use it for the mixdown; your host compensates for the delay on playback.

Display

The note being sung, how far off it is in cents, and the pitch going in traced against the pitch coming out.

Support · through Muse Hub, or direct to info@neverfoundaudio.com — include the name and version of your host.
