

Jazz Trumpet:

Take your jazz productions to the next level with the sound of the handcrafted Silverart trumpet and the incredible performance of a professional artist. This unique instrument combines two distinct sounds to give you a versatile range like no other. With 628 live-played loops in a variety of mute styles (Cup, Harmon, Straight, Plunger and Regular), you'll have endless options to shape your tracks, giving you everything you need to shape your sound and bring out the true character of the jazz trumpet.

Each loop is tempo-synced and root-key labelled so you can drop them into your sessions and get creative. With tempos ranging from 73 BPM to 240 BPM, these loops fit everything from mellow ballads to upbeat jazz songs. Feel the raw energy of a live trumpet performance.

- Straight Mute: A clear, nasal sound, often used in jazz or classical music.
- Cup Mute: A softer, muffled sound.
- Harmon Mute: A particularly jazzy, metallic sound, sometimes with a "wah-wah" effect when you move your hand over the hole.
- Plunger Mute: A rubber plug that produces a wah-wah-like effect.

Whether you're an experienced producer or just starting out, these loops are tempo-synced and root-key labelled, making them super easy to drop into your tracks. You'll have the flexibility to create anything from laid-back grooves to fast-paced jazz jams.

Recorded with Neumann KM 184 microphones in pristine 24-bit audio at 44.1kHz, the loops deliver crystal-clear sound quality. The WAV format means it's compatible with any DAW, giving you the freedom to create without limits. And because it's 100% royalty-free, you can produce, share and publish your music with ease.

Important: Please note that except the trumpets all instruments are for demonstration purposes only.
